

**FTX Pigmented Disposable Markers**

The FTX Marker is supplied with a round point felt tip

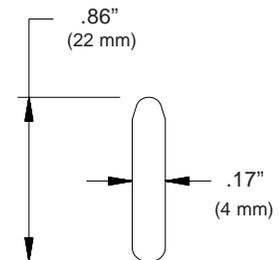

Universal FTX disposable valve action markers contain a fast drying, pigmented ink which produces a bold opaque mark on almost any surface. The ink in the FTX Marker is specially formulated to mark through a thin layer of oily film and produces a high visibility mark that is both fade and weather resistant. These markers are ideal for marking on metals, glass, plastics and other materials where pigmented inks must be used.

**FTX markers are available in white and yellow and come packaged in a display carton with twelve pens per carton. Replacement felt tips are packaged in quantities of one dozen per package.**

REPLACEMENT TIP

Unlike standard felt tip markers which contain dye base inks, FTX marker inks contain finely ground pigments. To facilitate the use of these pigmented inks, the tips for the FTX Markers are produced from continuous strands of a special fiber material which are formed together in a parallel orientation. The fabrication process produces tiny channels in the tips through which the pigments will flow. If the caps are left off these markers and the nibs are allowed to dry out, these channels become clogged with dried pigments and would require replacement to restore the marker to its original condition and performance.
